

Network Vulnerability Scanner Report

✓ 1bit2qbit.theburkenator.com

! The Light Network Scanner only ran limited, version-based detection. [Upgrade to run Deep scans](#) that check for 20,000+ additional vulnerabilities - with fewer False Positives.

Summary

Overall risk level:

Info

Risk ratings:

Critical:	0
High:	0
Medium:	0
Low:	0
Info:	4

Scan information:

Start time:	Jun 02, 2026 / 17:55:03 UTC+01
Finish time:	Jun 02, 2026 / 17:59:09 UTC+01
Scan duration:	4 min, 6 sec
Tests performed:	7
Scan status:	Finished

Findings

IP Information

CONFIRMED

IP Address	Hostname	Location	Autonomous system (AS) Information	Organization (Name & Type)
200.69.13.70	1bit2qbit.theburkenator.com	Ireland	Blacknight Internet Solutions Limited (AS39122)	Blacknight Internet Solutions Limited (hosting)

Details

Risk description:

If an attacker knows the physical location of an organization's IP address and its Autonomous System (AS) number, they could launch targeted physical or cyber attacks, exploiting regional vulnerabilities or disrupting critical infrastructure.

Recommendation:

We recommend reviewing physical security measures and monitoring network traffic for unusual activity, indicating potential cyber threats. Additionally, implementing robust network segmentation and adopting encryption protocols for data in transit can help protect sensitive information, even if attackers are aware of the IP addresses and the Autonomous System (AS) number.

DNS Records

CONFIRMED

Domain Queried	DNS Record Type	Description	Value
1bit2qbit.theburkenator.com	A	IPv4 address	200.69.13.70

Details

Risk description:

An initial step for an attacker aiming to learn about an organization involves conducting searches on its domain names to uncover DNS records associated with the organization. This strategy aims to amass comprehensive insights into the target domain, enabling the attacker to outline the organization's external digital landscape. This gathered intelligence may subsequently serve as a foundation for launching attacks, including those based on social engineering techniques. DNS records pointing to services or servers that are no longer in use can provide an attacker with an easy entry point into the network.

Recommendation:

We recommend reviewing all DNS records associated with the domain and identifying and removing unused or obsolete records.

Open ports discovery

CONFIRMED

Port	State	Service	Product	Product Version
80	open	http	-	-
443	open	https	-	-

▼ Details

Risk description:

This is the list of ports that have been found on the target host. Having unnecessary open ports may expose the target to more risks because those network services and applications may contain vulnerabilities.

Recommendation:

We recommend reviewing the list of open ports and closing the ones which are not necessary for business purposes.

OS Detection

UNCONFIRMED 

Operating System	Accuracy
Tomato 1.28 (Linux 2.4.20)	100%

▼ Details

Vulnerability description:

OS Detection

Scan coverage information

List of tests performed (7)

Port 80

✓ Scanned for version-based vulnerabilities

Port 443

✓ Scanned for version-based vulnerabilities

Generic tests

✓ Performed DNS enumeration

✓ Performed IP information lookup phase

✓ Performed OS detection

✓ Performed port discovery

✓ Performed version-based engine detections

Scan parameters

Target:	1bit2qbit.theburkenator.com
Preset:	Light
Scanning engines:	Version_based
Check alive:	True
Extensive modules:	False
Protocol type:	TCP
Ports to scan:	Top 100 ports
CVEs:	
Requests per second:	-
